The new P-4534DN, P-5034DN, P-5534DN and P-6034DN b/w A4 systems come with security systems that used to be found exclusively in large A3 systems. In addition to the usual standard features such as personal PIN, chip card reader\* and Data Security Check, the new printers also have software modules that securely encrypt and decrypt your data and monitor the entire system so that any attempts to hack into it are stopped before they start. But that's not all.

### HIGHLIGHTS:

 **PLAY IT SAFE:** The 'Trusted Platform' module for encrypting and decrypting print data has been added to the range of basic security\* features such as the 'Data Security Kit', the PIN entry requirement for print release and the chip card reader\*. 'Secure Boot' also checks whether the system has the correct firmware installed when it is booted. When the system is running, the 'Run-Time Integrity Check' monitors this, meaning the system independently ensures that no one can hack the system.

 **UNSTOPPABLE:** The larger the print job, the harder the printers have to work. Thanks to their powerful processor and generous 512 MB of memory, the new A4 systems output 45–60 b/w pages per minute. And with a high paper capacity of up to 2,600 sheets, even the largest print jobs are completed in no time at all. You won't want to miss out on the benefit of a system that delivers such high productivity while still being incredibly simple to use.

 **INTELLIGENT DESIGN:** The new printers are equipped with a clear and innovative LC display that enables you to use the systems easily, allowing you to devote your full attention to your work. The additional numeric keypad enables you to enter digits or your private PIN, which ensures that printing only starts after the PIN has been entered, thus preventing sensitive documents from falling into the wrong hands.

 **HIGHLY VERSATILE:** Anyone can get up and go to the printer. But not many print directly from their USB stick. Our printers make it even easier. Print jobs can be initiated from a desktop PC or remotely from a smartphone, tablet or even a Chromebook. It's easy to do using the Mobile Print app, over Wi-Fi\* or even through the WiFi Direct® function. This way, the print jobs are usually ready by the time they reach the system. It doesn't get any easier than that.
